April 10, 2019

A sheetlet is also issued. **Sheetlet composition:** 4 (1 set) stamps.
Sheetlet size: 96x84 mm. **Print quantity:** 15.000 sheetlets.

The great diving beetle (*Dytiscus marginalis*) is native to Europe and northern Asia. It lives in fresh water, either still or slow-running. This beetle hunts a wide variety of prey including small aquatic insects, fish and frogs. Its body has an elongated shape that makes it easy to move in the water. These beetles are able fliers, but they rarely do this, mostly when their living conditions become unfavorable and it becomes necessary to move to another water body.

The three-spined stickleback (*Gasterosteus aculeatus*) lives in rivers, lakes and sea coasts of Europe, the Far East, the west and east of North America. It usually inhabits coastal waters or freshwater bodies. The name was due to the three spines located in front of the dorsal fin. Its body length reaches 12 centimetres with a weight of 4 gram.

The narrow-clawed crayfish (*Astacus leptodactylus*) is common in freshwaters throughout Europe. Its length is from 16 to 18 cm, sometimes up to 30 cm. It prefers warm, nutrient-rich low-lying bodies of water or slow flowing rivers. It also lives in polluted water.

The lister's river snail (*Viviparus contectus*) lives in shallow, stagnant, marshy and overgrown reservoirs. The hole of the shell is closed with a lid, which gives the snail the opportunity to survive adverse conditions. Juveniles develop in the mother's body and are already quite formed. The name of the genus comes from this fact.

Colour of the postmark - black.

Special **postmark** and **FDC**
painted by A.Mityanin,
designed by M.Vitkovskaya.

A special cancellation on FDC will be carried out at the post office No.1 of Minsk (shop "Philately", 16 Moskovskaya street) on the stamps issuing day.
